Eight-toothed spruce bark beetle

Ips typographus (eight-toothed spruce bark beetle) targets weakened or damaged spruce trees, and storm events like we're experiencing this winter can create ideal habitat. It is being blown over from outbreaks in Europe and, if left unchecked, it could potentially build in numbers and would be devastating to the country's timber industry. We therefore advise proactive management of spruce to remove potential habitat and risk of infestation. They are found across mainland Europe and parts of Asia, and have been detected in the UK, particularly in Kent and East Sussex. Reports are that they are spreading including into Essex.

The Forestry Commission is also encouraging everyone in the <u>Proactive Spruce Removal</u> <u>Area</u> to be vigilant for windblown, snapped, damaged and stressed <u>spruce trees</u>, and to submit a <u>TreeAlert</u> report for anything of concern or email <u>ips.t@forestrycommission.gov.uk</u>. This could be landowners, those directly involved with managing spruce (e.g. foresters, tree surgeons, Christmas tree growers), or members of the public who use spruce woodlands recreationally (e.g. dog walkers, ramblers).
